```

Out[15]: Enter year:

The year 2005 is NOT a Leap Year

These are just codes for writing purpose above code contains total of 3 codes

You need not to write all the cases of the code just write total of 3 codes.

Code 1 :- Test weather the number is Odd or even

Code 2 :-Write a Python program that takes a student's percentage as input and prints a message based on their division. The program should categorize the percentage into First Division, Second Division, Third Division, or Fail based on the following criteria:

First Division: percentage >= 60

Second Division: 45 <= percentage < 60

Third Division: 35 <= percentage < 45

Fail: percentage < 35"

Code 3 :- Write a Python program that takes a year as input and checks whether it is a leap year.

The program should print a message indicating whether the entered year is a leap year or not.
